Document 1: Definition of Done

As Per Agile Extension to the BABOK® Guide v2, Definition of Done is a technique where the team agrees on, and prominently displays, a list of criteria which must be met before a backlog item is considered done.

That is the team has to create a well-defined, unambiguous, measurable, agreed-upon, and shared Definition of Done between all team members.

The best form of Definition of Done representation is a checklist of activities that has to demonstrate the agreed value and quality of a user story. So, this checklist should include:

- acceptance criteria (to satisfy customer requirements for a product)
- quality criteria (to satisfy quality requirements for a product)

Definition of Done may be defined for different levels of project work. For example, in Agile / Scrum framework these levels of work could be user story, sprint, and release.

User Story: Definition of Done checklist	Sprint: Definition of Done checklist	Release: Definition of Done checklist
Code Builds with no error	Satisfied DoD for each user story in the sprint	Satisfied DoD for each sprint in the release
Unit testing is complete	Marketing feedback is implemented	Production environment is ready
Code review is complete	Legal/Compliance review is complete	CI/CD is verified and working
Localization and translation is complete	User help guide created or updated	User help guide localized
Localization testing passed	Training video is created or updated	Training video is localized
Browser and/or device compatibility testing is complete	Refactoring is complete	Rollback process is documented
Regression testing is complete	Configuration or build changes documented	Smoke testing scenarios are ready
Automation tests are written and passed	Performance testing is complete	Customer support team is trained
Acceptance criteria is met	Security testing is complete	Release communications are sent
Signed off by product owner	Sprint marked as ready for deployment	All stakeholders signed off for the release

Document 4: Agile PO Experience

The Product Owner has a vision of the product keeping the domain/industry experience and the market need.

❖ Following are the responsibilities of PO in a project

➤ Market Analysis ▫ Analysis of market need/demand ▫ Availability of similar products in the market

➤ Enterprise Analysis ▫ Due diligence on the market opportunity

➤ Product Vision and Roadmap ▫ Product vision keeping the need analysis in mind ▫ Product roadmap with high-level features and timeline

➤ Managing Product Features ▫ managing stakeholder expectations and prioritizing needs ▫ Prioritization of the epics, stories, and features based on criticality and ROI involved

➤ Managing Product Backlog ▫ Prioritization of user stories ▫ Reprioritization based on stakeholders' needs ▫ Epics planning

➤ Managing Overall Iteration Progress ▫ Sprint progress review ▫ Reprioritization of sprints and epics if needed ▫ Sprint retrospectives with Business Analyst

❖ From this project I have learned how to handle sprint meetings such as

➤ Sprint planning meeting

➤ Daily scrum meeting

➤ Sprint review meeting

➤ Sprint retrospective meeting

➤ Backlog refinement meeting

❖ Also, User stories creation and what things will be included in user stories such as

➤ Story no

➤ Tasks

➤ Priority

➤ Acceptance criteria

➤ BV & CP value

❖ In Scrum, a product owner serves as the liaison between multiple areas of an organization. This person communicates with business stakeholders and collaborates closely with Scrum teams to keep all areas of the business informed on a project's development.

❖ the product owner develops a vision of a product's function and operation, which in turn allows this Scrum team member to define product features and break those features into product backlog items.
